CORROSION PROTECTION AGAINST HYDROGEN

Condition: New. Publisher/Verlag: Wiley-VCH | Understanding how to protect materials against hydrogen attack is paramount to extending component lifetimes and reducing plant downtime. The materials selection process can sometimes become complex; usually involving multiple factors such as high strength requirements, operating temperature, high corrosion resistance, availability and cost. Hydrogen is used for numerous chemical processes, for example for the synthesis of ammonia and methanol as well as in hydrogenation processes such as for the production of gasoline or for fat hardening. In various metal extraction processes hydrogen is used as a reducing agent and is also used as a shielding gas for welding and metallurgical processes. The present handbook compiles new and updated information on the corrosion behavior of materials that are in contact with hydrogen or environments containing this gas. This compilation is an indispensable tool for all engineers and scientists dealing with corrosion problems in hydrogen containing environments of any industrial use. | Preliminary Remarks A METALLIC MATERIALS Aluminum and aluminum alloys Copper and copper alloys Iron, iron-based alloys and steels Nicke and nickel alloys Titanium and titanium alloys Zirconium and zirconium alloys B NONMETALLIC INORGANIC MATERIALS Carbon and graphite Binders for building materials Glass, fused silica glass and silica glass Enamel Oxide ceramic materials Metal-ceramic materials C ORGANIC MATERIALS Thermoplastics Elastomers Thermoplastic elastomers Duroplastics D MATERIALS WITH SPECIAL PROPERTIES Coatings and films Gaskets and packings Composite materials E MATERIAL RECOMMENDATIONS Bibliography Key to materials compositions Index of materials Subject index | Format: Hardback | Language/Sprache: english | 1049 gr | 244x159x28 mm | 480 pp.
