DOWNLOAD

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from Quarterly Journal of Microscopical Science, 1882, Vol. 22 Since the main facts of development are now discovered, it will be perhaps the simplest plan to trace the history of the adult fungus from the Uredospore - to relate, in fact, what occurs after sowing the spores on coffee, giving the details of structure as we proceed. The Uredospore Sporangium of Abbay and Morris) is figured on Plate I, fig. 1, in various positions, and is seen to be a somewhat kidney-shaped body, broader, and rounded at the free end, and slightly tapering at the other, where it is attached by a very short pedicel to the spore-bearing structure hereafter described (pl. III fig. 40, c and f). The free upper surface is convex from before backwards and from side to side, and is studded with small solid papillae. The remainder of the surface forms two converging, slightly flattened sides, which gradually meet below in a broad, rounded, saddle-like ridge. This is quite smooth, concave from before backwards, and convex from side to side. The vertical transverse section of such a body is somewhat triangular, with rounded corners; but various figures are obtained by projecting the several oblique optical sections as it rolls over (pl. 1, figs. 1 The upper side alone is normally ornamented, though the papillae at times occur on the upper portions of the otherwise smooth sides; these papillae are outgrowths of the thick exospore, and are usually pointed and regularly distributed on its free surface (fig. 6 d). The granular protoplasmic contents of the spore are enclosed by a delicate hyaline endospore, which becomes readily seen on germination, or may be detected by such reagents as...
