BREAST CANCER AND THE POST-SURGICAL BODY : RECOVERING THE SELF

DOWNLOAD

Palgrave Macmillan, UK, 2006. Hardcover. Condition: New. First Edition. 224 Pages. Samantha Cromptvoets argues that the current treatment of the post-surgical body within breast cancer culture and wider society allows no space for women to reconceptualize their bodies as normal, feminine, or complete in the absence of a breast or breasts. Instead, the mastectomized body is positioned as transient, to be 'fixed' as soon as possible. Further, that that breast restoration, wearing a prosthesis, or surgical reconstruction, is wrongly situated as the only mechanism available for women to renegotiate a complete sense of self. Drawing on detailed empirical study of a group of women recovering from breast cancer, the book moves beyond individual experiences to examine the politics of the choices available to women and what constrains and influences those choices. This approach provides a powerful analysis of the decision-making dilemmas facing women after breast cancer surgery, and the socio-political context in which their decisions about breast restoration are made.
