

## DEVELOPMENT OF OXYGENATED HYDROCARBON-BASED CO<sub>2</sub>- SOLUBLE POLYMERS

Filesize: 3.81 MB

### ***Reviews***

*I just started off reading this article ebook. It is actually written in basic words and not confusing. I am just very happy to let you know that this is the best ebook I actually have read through inside my individual daily life and can be the finest ebook for possibly.*

## DEVELOPMENT OF OXYGENATED HYDROCARBON-BASED CO2-SOLUBLE POLYMERS

Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Using CO<sub>2</sub> as a Green Solvent | Recently the use of sub/supercritical CO<sub>2</sub> has received much attention as a green alternative to organic solvents for chemical processes because of its pressure-tunable physicochemical properties and economic advantages. But, the advantages are diminished because of a narrow range of CO<sub>2</sub>-soluble materials. The goal of this work is to identify and design oxygenated hydrocarbon-based CO<sub>2</sub>-soluble polymers that are able to serve as construction blocks for CO<sub>2</sub> soluble materials. Without concerning on the cost and the environmental persistence like fluorinated materials, the inexpensive and environmentally benign materials would significantly enhance the viability of CO<sub>2</sub>-based technology. We proposed specific new polymer structures: poly (3-acetoxy oxetane), poly (vinyl methoxymethyl ether), and cellulose triacetate oligomers. Phase behavior studies were also performed with CO<sub>2</sub>-philic compounds containing vinyl acetate, propylene glycol, or tert-butyl groups. New non-fluorous CO<sub>2</sub>-soluble materials were identified, which were acetate-rich with flexible chains, weak self-interactions, and multidentate interaction between CO<sub>2</sub> and the functional groups. | Format: Paperback | Language/Sprache: english | 168 pp.
